

Customer Self-Generation Interconnection Policy

2/16/2022

Section 1: City of Breese shall make available, upon request, interconnection services to any customer that meets the required guidelines. Interconnection services in this policy refers to on-site generating facilities (as defined in the Customer Self-Generation Net Metering Policy) connected to City of Breese electric distribution system in a manner that will allow excess electricity generated by the eligible on-site generating facility to be safely delivered onto City of Breese's electric distribution system.

Section 2: Guidelines for interconnecting to the utility system are as follows;

- a. Only generating facilities that have been approved by the Utility Plant Operations Manager shall be interconnected with City of Breese's electric distribution system.
- b. All interconnections shall comply with codes established by National Electrical Code (NEC), National Electrical Safety Code (NESC), Institute of Electrical and Electronics Engineers (IEEE), and Underwriters Laboratories (UL) as they may be amended from time to time.
- c. Construction and development of generating facilities is required to follow all applicable building codes, permitting processes, and zoning rules.
- d. City of Breese is under no obligation to purchase energy supplied to the utility under this standard. This does not preclude the customer meeting applicable standards that would allow the customer to supply power onto the utility's system and receive credit for such energy under the utility's Customer Self-Generation Net Metering Policy or the Public Utility Regulatory Policies Act (PURPA).
- e. The City of Breese may require periodic testing of systems. All test reports shall be submitted to the City of Breese Utility Department after completion of the testing.
- f. City of Breese may charge reasonable fees associated with the implementation and application of this policy.

Section 3: The terms and conditions for any and all such interconnections are set forth in the attached model Interconnection Agreement, which may be reasonably adapted by City of Breese staff from time to time in implementing this policy and the Customer Self-Generation Net Metering Policy.

Section 4: City of Breese staff shall develop such documents as needed to implement this policy from time to time.
